Cognitive function business rules:

1. Each cognitive function stack needs to alternate between extroversion and introversion (for example: Entj is TeNiSeFi, INTJ is NiTeFiSe -> see the alternation between i and e)
2. Each stack needs to make sense (can't have 2x of the same function repeating -> like TeNiNeSi, for example) and line up with the stack of an actual MBTI type.

General Typology rules:

Difference between Introverts and Extroverts:
• The 1st function is swapped with the 2nd, and the 3rd function is swapped with the 4th when converting from Introvert to Extrovert or vice versa.

Difference between Feelers and Thinkers (of a same type -> ESFP vs ESTP, for example):
• Placement of the Feeling function is swapped with the placement of the Thinking function. All other functions stay the same.

Difference between Intuitives and Sensors (of a same type -> INTJ vs ISTJ, for example):
• The first letter of the 2x letter trait (Si-Ne vs Ni-Se) changes, all other functions stay the same.
